

Task 2: UI/UX Prototyping Report

Design Inspiration

- **Existing IMS Portals:** Adopted the primary color scheme (navy blue, teal, and white) to maintain standard academic and institutional visual branding.
- **Spotify:** Replicated the block-like, segregated menu structure for the Dashboard module. This segregates distinct application features into prominent, easily tapable surface cards.
- **Google Calendar:** Extracted the grid based temporal layout for the TimeTable module. This maps days to columns and hours to rows for intuitive visual scheduling.

Usability Principles Applied

- **1. Strive for consistency:** Enforced a strict, unified color palette, typography scale, and standardized component library uniformly across the Figma mockups and Jetpack Compose implementation.
- **2. Provide appropriate feedback:** Integrated explicit system state notifications in the Time Table module. The interface generates a success toast ("Slot

Assigned Successfully") upon valid data entry and triggers a red error banner indicating a conflict when invalid scheduling occurs.

- **3. Reduce Short Term Memory load:** Implemented a persistent bottom navigation bar across all primary application views (Dashboard, Schedule, Attendance). This allows seamless module switching without requiring the user to recall navigational hierarchies.
